

NUGGET BOOSTER – SD-GP MINELAB

Nugget Booster Amplifier suit SD / GP Minelab Metal Detectors.

WILL NOT SUIT THE GPX SERIES

Enhance your early model Minelab SD / GP detector and Boost those weaker target signals with my Nugget Booster amplifier. Turn it into a BEASTY. Audio boosters increase your chances of hearing smaller faint targets - By amplifying your detectors threshold, it allows you to set the threshold level lower than normal, potentially hearing those fainter signals much easier. Also boosters are ideal on windy days and when scrubbing the coil thru dry leaf matter and good for persons whom are a tad deaf or are a bit tone deaf. My boosters are loud and I've even had some to crank it up even more for some. You can also use speaker or headphones with my units with the 1/4 inch jack.

This is a quality product with reinforced cable to plug connection. You can switch amplifier ON or to BYPASS for normal detector audio. Also has volume to adjust to comfortable level. Attaches to side of your detector with Velcro. Has LED on indicator (to remind you to turn it off when not in use).

Don't worry about flat internal batteries as this will run from the existing detector battery system.

Made in Australia by a prospector / technician for the prospector.

Don't let the price fool you. These amplifiers are as good as others on the market and at a realistic price.
