

“NUGGET BOOSTER GPX V3” SPEAKER AMPLIFIER SYSTEM

“Nugget Booster “ Amplifier to suit MINELAB PI Metal Detectors.

My New Nugget Booster GPX V3 will boost weaker signals especially when searching thru dry leafy ground or in noisy environments like windy days or when machinery is about. Also good for hearing deficiencies.

The Nugget Booster uses the Detectors internal battery system to supply the amplifier so there is no internal battery in the Nugget Booster. Just plug your Audio Power Lead (Patch Lead) into the Nugget Booster and then Plug the Nugget Booster cable into your Minelab Battery pack. Attach the unit to your harness or Battery pack with the supplied clip or Velcro. It has a bypass on / off switch and volume control to suit your hearing level. Plug your phones or speaker into the ¼ in jack and adjust volume for comfortable hearing level. There is a LED to indicate on or off mode.

Please email me with your orders and any queries you may have. We accept Paypal, money order but prefer Direct Deposit.
